

SsmarTest COVID-19 IgM/IgG Detection Kit

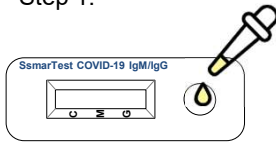

- Screening test of COVID-19

The **SsmarTest COVID-19 IgM/IgG Detection Kit** is an *in vitro* diagnostic medical device that measures the presence of IgM and IgG antibodies to SARS-CoV-2 in blood (serum or plasma) with immunochromatography and thus assists in diagnosing COVID-19. The test results are used in conjunction with other laboratory tests.

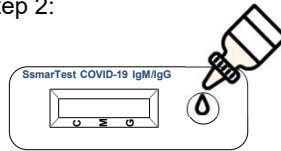

Simple Steps

Step 1:

Add 2 drops of sample

Step 2:

Add 2 drops of running solution

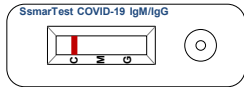

Step 3:

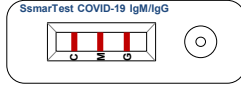

Read results in 20 minutes

Interpretation of Result

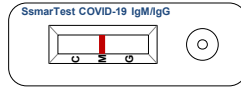

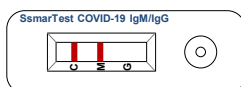

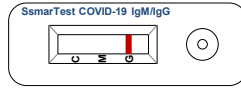

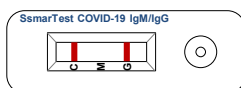

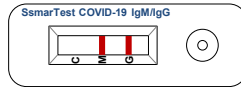

NEGATIVE

POSITIVE

RE-TEST

IgM	IgG	Interpretation
-	-	X Not infected
+	+	O Infected (8 ~ 15 D)
+	-	O Early stage
-	+	O Infected (15 D<), past or 2 nd infected

Abbr. -, negative; +, positive; D, day

Diagnostic performance of SsmarTest COVID-19 IgM/IgG Detection Kit

Parameters	Analytical and clinical performance
Sensitivity	94.64 %, both IgM and IgG (with limited cases, ongoing clinical evaluation)
Specificity	96.83.0 %, both IgM and IgG (with limited cases, ongoing clinical evaluation)
